Summary

Java Developer with 7+ years experience implementing data-backed solutions to improve web-based technology and application development. Expertise in developing and deploying innovative features, enhancing product usability and functionality, stabilizing performance, and improving consumer experience.

Experience

Senior Java Developer – Google – 2017 - 2022

- Developed new features, enhanced functionality, gathered needs, and provided assistance to 12 mainstream media stations.
- Collaboration with developers on the conversion of six major websites as well as the development for site migration.
- Led the creation of a blog solution in Stack to allow field technical writers to post headlines and articles via a portable mobile interface.
- Created React and TEA-based algorithms for media apps to test their user interface across different operating systems.

Frontend Engineer – Microsoft — 2014 - 2017

- Collaborated with tenants of 60-unit building on late rent payments, maintenance.
- Developed, refined and managed all aspects of client sales, business, and mobile web pages based on a Scrum framework.
- Reduced page load times by introducing PHP Zend architecture into the server mainframe.
- Coded JavaScript backend unit tests and Flex-based unit tests into user-based patterns by incorporating Google Analytics into insights.
